

## **NEIL PASRICHA – A/V RIDER**

### **STAGE SETUP:**

- Completely empty (no chairs, no podium) except for three tall, sturdy flipcharts arranged in center of stage. Neil will use these to draw models during speech.
- Each flipchart to have a black and red marker
- One tall circular table on side of stage with a glass or bottle of water

### **COMPUTER SETUP**

- Speaker may bring his own Macbook and dongle to plug into AV equipment and show a few slides before using the flipcharts / iMAG. (Not all presentations include Powerpoint slides but need ability to plug in.)
- Will need a clicker (slide advancer)

### **SCREEN SETUP:**

- For audience >400 people, the ideal setup is three screens:
  - Left and right screens show an iMAG (live broadcast) trained on speaker and allows the takeaways / models on the flipcharts to be viewed clearly by the audience sitting farther from the stage.
  - Center screen is the conference agenda slide (using the conference's existing template). Optional to feature speaker's name, The Happiness Equation book cover, and speaker's Twitter handle (@neilpasricha).
- For audience <400 people, one simple screen and no iMAG is fine, as long as audience can see the flipcharts clearly from their seats. (Writing on flipcharts will be very large.)

### **SOUND:**

- Wireless Countryman microphone
- (If no Countryman microphone available, wireless LAV microphone.)

### **LIGHTING:**

- House lights dimmed to 50% when speaker goes onstage
- House lights brightened to 75-100% for audience Q&A after keynote
- Stage lights to be at 100% during entire speech
